July 2018 – MEDIA RELEASE

Help Your Operations Run Smoother! Use Rubber Slide® for Aftermarket and Fleet Installation, Repair and Maintenance Services.

Burlington, New Jersey, USA: [Rubber Slide](#) significantly reduces friction, easing the installation of parts and fittings. Pressing, pushing and manipulating rubber or plastic parts into position is hard work. Rubber Slide provides temporary lubrication to ease assembly. Once dry, the lubrication is gone resulting in a tight-fitting assembly. Your job is completed quickly with no strain and no damage to the rubber.

Rubber Slide can be used for the installation and replacement of boots, bumpers, bushings, diaphragms, grips, grommets, hoses, insulators, mounts, O-rings, plugs, rubber moldings, seals, sleeves, tires, rubber washers and wire harnesses.

Why use Rubber Slide?

- Faster Assembly
- Less Part Damage
- Fewer Injuries

Advantages of Rubber Slide:

- Eases installation of rubber parts.
- Safe, non-toxic, and biodegradable.
- Temporary – once dry, the lubrication is gone.
- Does not dry out rubber or otherwise impair its performance.
- No silicon or petroleum.

Key industries for Rubber Slide include maintenance and repair services for cars and trucks, rental and fleet operations, appliances, pumps, HVAC, pool and spa, and electrical services.

About International Products Corporation: IPC manufactures specialty chemical products, including [cleaners](#) and [assembly lubricants](#). Products are made in the USA.
